The direct savings of 14 percent are achieved either by using the direct method or by using the indirect method. The indirect method is more complex, requiring the use of the following steps: (1) Using the indirect method, the total of all indirect costs is determined; (2) these costs are then assigned to a single pool of indirect costs; (3) the indirect costs are then assigned to the direct costs, using the direct costs as a base. This method is more complex, but it is more accurate than the direct method.

There is a growing body of research on the effects of the environment on human health. This research has shown that exposure to environmental pollutants can lead to a variety of health problems, including respiratory disease, cancer, and reproductive problems. The research also suggests that the environment can affect mental health, with exposure to pollution leading to increased stress and anxiety. This research has important implications for public health policy, as it suggests that reducing exposure to environmental pollutants can help to improve human health.
