all of them have. They're looking for information to make their own decisions, says the chief therapist. "Information is power," he told Wilson. So he let the Blacks see everything in a room, just as he would give it to the Whites. The Blacks were always a little more nervous, but he says they were more comfortable. By the time the Blacks were all given the good news, the Whites had been told the same thing. "I was surprised," says Wilson. "The Blacks were a little more nervous, but they were more comfortable."

the most common response to the long-term nature of the threat of nuclear war. The response usually is a very low level of risk. This is also consistent with the general theory of risk. When the lifetime mortality rate is small, a more rational risk strategy goes, with reference to food poisoning, heavy smoking or AIDS. The likelihood of death is small. The likelihood of death is greater than that in smoking or AIDS.¹⁰

1. The first step is to identify the problem. In this case, the problem is that the company is not meeting its sales targets.

It is important to note that the results of this study are based on a cross-sectional design. Therefore, the causal relationships between the variables cannot be definitively established. Future research should consider longitudinal designs to explore the temporal dynamics of these relationships.
