

These studies have not taken into account the possibility that the observed association between the use of a mobile phone and the risk of a road traffic accident may be due to the fact that the use of a mobile phone is more likely to be observed in those who are driving at high speeds. This is because the use of a mobile phone is more likely to be observed in those who are driving at high speeds. This is because the use of a mobile phone is more likely to be observed in those who are driving at high speeds. This is because the use of a mobile phone is more likely to be observed in those who are driving at high speeds.

These findings are consistent with the idea that the observed associations between the use of the Internet and mental health are not necessarily causal. The findings suggest that the use of the Internet is associated with mental health problems, but the direction of the association is unclear. The findings also suggest that the use of the Internet is associated with mental health problems, but the direction of the association is unclear. The findings also suggest that the use of the Internet is associated with mental health problems, but the direction of the association is unclear.
