

There exists only one option to prevent the devastation. Motts Bar and Port London Locks must be closed immediately, just as they closed the St. Anthony's Lock in Minnesota to stop the carp. Then we can look to fund construction of an electric barrier if you choose to reopen the locks. If the locks are not closed within a few months, the silver carp will pass through the Motts Bar Lock and continue up the TR River, destroying Motts Bar, Milton Hill, Port London, and Pelican Lakes, with over 1,000 miles of beautiful shoreline. The fish are presently in Chikamauga Lake and will soon reach the Motts Bar Lock.

Any financial burden on the river transportation industry is few million dollars at most in comparison to the \$1.5 billion annual loss to this region, let alone the loss of recreation and small businesses. This financial and ecological devastation will be permanent and only grow worse as time goes by, as is presently happening in many lakes.

I am asking you to speak up in defense of our beautiful lakes, the economy, environment, recreation, property values, and businesses on the lakes, and request Governor Lee to work with TRS, the Corps of Engineers, and the Federal government to immediately close the locks. This action will leave behind the greatest legacy imaginable, "Saving the entire Upper TR River Basin from environmental and economic devastation."

Time is the friend of the Asian carp and the enemy of our lakes. They can lay 500,000 to 5,000,000 eggs twice each year making it virtually impossible to control once they get into a lake. Time for talk, planning, and concern is over. More time spent discussing this issue will only allow the Asian carp entry into our lakes. I ask you to not let that happen and shut the door to the Asian carp. Please don't allow what has taken place at so many other lakes and rivers to take
