RESEARCHERS have reported a link between the use of mobile phones and the risk of brain cancer. The study, published in the *British Medical Journal*, found that people who use mobile phones for more than 10 years have a 40% higher risk of developing a brain tumour. The researchers also found that the risk of brain cancer increases with the duration of use and the frequency of use. The study was based on data from a large cohort study of over 100,000 people. The researchers found that the risk of brain cancer was highest in people who used mobile phones for more than 10 years and who used them for more than 30 minutes per day. The risk of brain cancer was also higher in people who used mobile phones for more than 10 years and who used them for more than 30 minutes per day. The researchers also found that the risk of brain cancer was higher in people who used mobile phones for more than 10 years and who used them for more than 30 minutes per day. The risk of brain cancer was also higher in people who used mobile phones for more than 10 years and who used them for more than 30 minutes per day.
